

PRESTON KUP SET

Supplied in packs of two different sizes, the popular Preston Kups come with two sizes of internal diameter attachments for different diameter pole sections and have brass threads.

COMPETITION SPOT ON KUP KIT

The Preston Competition Spot On Kup Kit is a lighter and stiffer version of the original model. It has the Spot On facility to instantly adjust the length of the top kit making it perfect if your power and match top kits are different lengths. Available in two sizes, with reinforced ends, to allow cutting back to suit all poles.

Comes with two Preston Kups and attachments. The attachments have two sizes of internal diameter for different diameter pole sections and have brass threads.

PRESTON COMPETITION KUP KITS

Preston Competition Kup Kits are manufactured from high quality carbon to make them as stiff as possible when cupping in bait, especially at long range. Designed with a long re-enforcement to the base of the largest section so it can be cut back as required.

PRESTON CXR KUP KIT

Preston CXR Kup Kit is designed for the CXR range of poles although the base section has a long area of reinforcing that can be safely cut back for a perfect fit on many other poles. The two-sectioned Kup Kit comes with two Preston Kups and attachments. The attachments have two sizes of internal diameter for different diameter pole sections and have strong brass threads.

Large Medium Small

CAD POTS & CARP CAD POTS

Cad Pots are designed to be left on the pole whilst fishing. They clip directly onto the top of the pole and are available in three sizes (Cad Pot Micro, Cad Pot Midi and Cad Pot Carp). Available in multiple packs with removable, aperture opening tops.

The Carp Cad Pot has a large 'keyhole' groove that will fit larger diameter power kit tops.

DRIP FEEDER POT

Made with a special dispensing neck, the Drip Feeder Pot enables you to feed small amounts regularly without the need to ship back and refill your pot. Works best with small pellets, corn and casters. Two pots per pack.

FEEDAPOT

The revolutionary Feedapot has a simple elastic attachment and unique clip-on, clip-off operation that makes regular feeding quicker and easier than ever before. Due to the elastic attachment it will fit even the thickest power top kits.

PASTE POTS
PRECISE POLE HOOKBAITING

PASTE POTS

Developed in conjunction with Andy Findlay after witnessing the devastating effects of his home made versions.

They are large enough to deliver loose feed pellets and your soft paste hookbait in the required area, we have developed three different sized fittings to cope with the range of depths you are likely to encounter.

Available in three sizes: Small, Medium and Large.

1 Ship your pole out past the baiting area with your paste hookbait and loose feed in the pot.

2 Once at the desired distance, turn the pole over, allowing your rig to swing out and depositing your loose feed.

3 Once your rig starts to settle draw your pole back to the baited area.

THE PELLETT MASTER

When it comes to finding the best modern approach for commercial carp fishing, you need look no further than inside the mind of match ace Andy Findlay. He's the man to thank for numerous modern match fishing techniques, including the revolutionary Pellet Feeder launched by Preston Innovations in 2007.

This clever idea was based around a real Heath Robinson affair Andy created at home, to suit his needs on commercial carp venues in the UK. The idea was to present the hookbait pellet right in the centre of his feed pellets, rather than away from the feeder like when open-end feeder fishing. The Pellet Feeder has benefits over the Method feeder, too, as the hooklink cannot spring away from the feed once disturbed. "Carp love pellets," smiles Andy, "but sometimes the Method isn't the best approach to catch them, especially on waters where it is overused. "Sometimes the carp attack the feeder quite aggressively, so it's important that your hookbait is sat, right amongst the feed, so you get quicker bites. "In a match situation, you want to get as many fish on the bank as possible in the shortest period of time. The Pellet Feeder allows you to do this better than anything else. "The new 2010 Preston Innovations Pellet Feeders are really easy to load," he adds. "And your hooklink exits right from the centre of these in-line feeders, leaving your

hookbait exactly where you need it." But it's not just a case of loading in some pre-soaked pellets and casting it out anywhere. According to Andy, this is an approach where it really pays to be accurate. "When fishing the Pellet Feeder, the golden rules are to utilise your reel's line clip, be accurate, and leave the feeder where it hits bottom so that it can do its work," he explains. "I always leave the line from the quivertip to the Pellet Feeder slack. This way you can see your line bites, watching the line between the tip and the water surface, without the tip moving. "If the line was tight and a fish bumped into the line, it could move your feeder and hookbait away from the pile of pellets, which is defeating the object of the exercise. "When you get a proper bite you know about it! The tip pulls round, stays there and you simply pick up the rod because the fish is on." Watching Andy in action with the Pellet Feeder is like poetry in motion, hitting the same spot every time, waiting for the tip to go around with a hungry carp on the end. If bites do dry up, he'll try a different hookbait to ensure he's maximizing his swim. "Sometimes you can tweak the length of the short hooklink to get more takes, but other times changing from a hard pellet to a soft hooker pellet can be better, or even a lump of punched luncheon meat," says Andy. "With the Fin Feed pellets bursting from the feeder though, it often doesn't matter what's on the end!"

PELETT FEEDERS

Designed for use with pellets and short hooklengths, the clear Pellet Feeder is a direct copy of one of Andy Findlay's 'home-made' models.

Fitted with a short length of elastic, that moves through the feeder to reduce resistance on the take, and prevent hook pulls at the net, Pellet Feeders are available in two sizes.

By using a short hooklength, your hookbait sits just outside the feeder and gets surrounded by the loose pellets as they fall from the feeder.

15g	20g	20g	25g

INLINE PELLETT FEEDERS

Preston Inline Pellet Feeders have been developed to use with damp pellets, using a short hooklink you can present your hookbait right amongst your feed.

Our pellet feeders feature a flat design which makes them ideal for fishing tight to islands where the dimpled lead will help them grip on the sloping margins. Their line through nature means they can be fished running or semi fixed for safety.

To make soft feed pellets, put the pellets in a bait tub and cover them in water. Leave them underwater for one minute for each millimetre the pellet is — so two minutes for 2mm, four minutes for 4mm and so on. After soaking, drain off all the water give them a shake and leave for 10 minutes, they are then perfect for putting in a pellet feeder or around a Method feeder.

Andy Findlay Tip

■ QUICK RELEASE METHOD MOULD
 Developed to allow perfect loading of groundbait onto the Preston In-line Flat Method Feeder, the Quick Release Method Mould quickly forms a perfect feeder full of groundbait or pellets every time. This ensures more accurate casting due to the constant size of the loaded feeder. The release button on the bottom ensures that the feeder is ejected consistently. Designed to be used in conjunction with the Preston In-line Flat Method Feeder. Available in small, medium and large.

■ IN-LINE FLAT METHOD FEEDER
 Can be used on their own or as part of a system with the Quick Release Method Mould. The flat-bottomed design makes them ideal for all situations, including casting tight to the sloping banks of an island.
 The recess in the front of the feeder accepts a size ten swivel or a Preston Ring Swivel, which will provide just enough tension to make a semi-fixed rig. Alternatively they can be used with Korum Quickchange Beads to make a completely free-running rig.

SIZES AVAILABLE					
SMALL		LARGE		X-LARGE	
15g	30g	15g	30g	45g	45g

■ ELASTICATED FLAT METHOD FEEDER
 Very similar to the In-Line Flat Method Feeder in both size and construction but elasticated for shock absorbing fish-playing.
 The flat-bottomed design ensures they always land the correct way up with the bait at the top of the groundbait or moulded pellet ball. The light brown/translucent colour blends in with both groundbait and the bottom.

SIZES AVAILABLE					
SMALL		LARGE		X-LARGE	
15g	30g	15g	30g	45g	45g

■ RING SWIVELS
 Preston Ring Swivels are ideal for use in conjunction with In-Line Flat Method Feeders to make a safe semi-fixed rig.

■ WIRE CAGE FEEDERS
 The Wire Cage Feeder features a wider lead. This offers increased stability when cast tight to islands. The ultra strong, non-glare cage construction resists damage when cast into shallow water.
 The special anti-tangle feeder link helps with casting by absorbing shock.

SIZES AVAILABLE							
SMALL		MEDIUM		LARGE		X-LARGE	
20g	30g	20g	30g	25g	35g	25g	40g

■ OPEN ENDED GROUNDBAIT FEEDERS
 The Open Ended Feeder features a wider lead—for increased stability, whilst the natural camouflage colour is unobtrusive to fish.
 The semi-flexible feeder link helps to reduce tangles by making the feeder stand away from the rig.

SIZES AVAILABLE					
SMALL		MEDIUM		LARGE	
20g	30g	20g	30g	20g	30g

■ QUICKLOAD FEEDERS
 Quickload feeders can be filled quickly with the cap trapped on the swivel link. Cut guides on the sides make them easy to be opened out for larger particles.
 Finished in an unobtrusive brown colour and with a range of different loadings these block-end feeders have a slightly oval profile.

■ DUTCHMASTER BULLET FEEDER
 Stream-lined wire cage feeders, with the loading on the base to help them cast straight, even in crosswinds. Available in two sizes and a variety of weights to suit all conditions these feeders are designed for long distance fishing.

Des Shipp Tip

For fast and accurate casting every time try using a Preston Innovations Flat Inline Feeder with the Preston Innovations Quick Release Method Mould for a consistent bait presentation.

CATAPULTS
PINPOINT CATAPULT

■ **PINPOINT CATAPULTS**

Preston Pinpoint Catapults are designed for anglers who require the ultimate in accuracy and are ideal for all distances. The special soft moulded pouch ensures accurate bait grouping and the balanced handle means that you can lay the catapult on a side tray with the pouch hanging down for one-handed filling. A quick change elastic system makes swapping elastics and pouches easy.

Pinpoint Quick Change Elastic System

Pinpoint Catapult Solid Pouch
The solid pouch is particularly good for dry baits such as pellets giving tight grouping.

Spare elastic and pouches are also available.

“The Pellet Catapult has non-tangle swivelling elastic attachments and a medium elastic for accuracy.”

■ **PELLET CATAPULT**

Fitted with a solid pouch designed for feeding pellets of all sizes. The new Pellet Catapult has non-tangle swivelling elastic attachments and a medium elastic for accuracy.

■ **GROUNDBAIT CATAPULT**

Fitted with a large preformed groundbait pouch, swivelling elastic attachments and heavy elastic. Fires groundbait up to 50m.

■ **STOTZ**

Stotz are a hybrid shot designed for use on larger diameter lines (they also work perfectly on fine diameters too). The wide groove makes placing them on the line quick and easy. Another advantage is the increased surface area that grips the line. This prevents damage and also stops the Stotz 'pinging' off under stress. The flat ends of Stotz produce a neat bulk when they are grouped together.

STOTZ SIZES AVAILABLE					
8	9	10	11	12	13
8 - 11 FOUR WAY DISPENSER			13 - 8 SIX WAY DISPENSER		
STOTZ SIZES - MAINLAND EUROPE ONLY					
4	6	4 - 11 SIX WAY DISPENSER			

■ **SLIP SHOT**

Slip Shot has a very thin, dark blue PTFE coating. This reduces line damage when moving the shot and also prevents the white covering that occurs over time. Accurately calibrated for consistent weight, Slip Shot are made from very soft lead and have a well-formed, central cut groove.

SLIP SHOT SIZES AVAILABLE					
8	9	10	11	12	13
13 - 8 SIX WAY DISPENSER					
SLIP SHOT SIZES - MAINLAND EUROPE ONLY					
4	6	1	BB	AA	SSG
4 - SSG SIX WAY DISPENSER					

■ **SUPER SOFT SHOT**

Accurately calibrated for consistent weight, Super Soft Shot is made from 100% lead and has a well-formed, central cut groove, which makes positioning them on both large and thin diameter lines quick and easy. The super soft lead also enables them to be moved on line with minimal damage.

SUPER SOFT SHOT SIZES AVAILABLE					
8	9	10	11	12	13
13 - 8 SIX WAY DISPENSER					
SUPER SOFT SIZES - MAINLAND EUROPE ONLY					
4	6	1	BB	AA	SSG
4 - SSG SIX WAY DISPENSER					

STOTZ

■ **STOTTA**

Developed to make the application of Stotz even easier. Designed to work with all sizes, the flat end of the Stotta allows a Stotz to be selected and applied quickly and easily. The Stotta can also be used to quickly remove Stotz without damaging your line.

■ **NON-TOXIC SHOT**

Preston Non-Toxic Shot is made from a soft dense alloy that is accurately calibrated for consistent weight. The grooves are designed to be closed with gentle finger pressure and a special recess in the top of the groove enables them to be opened easily with your fingernail.

NON-TOXIC SHOT SIZES					
SSG	AAA	BB	1	4	6
DISPENSER SSG - 6					

Preston shot is available in a wide range of sizes...

■ **JUMBO LOCKING SHOT**

Preston Jumbo Non-Toxic Locking Shot are designed for locking big wagglers. A recessed groove enables you to open them easily for positioning and re-use. Available in 2SSG and 3SSG.

LINE THROUGH OLIVETTES

Streamlined dense alloy olivettes, with in-line construction fitted with a soft tube insert to protect your line from damage. Available in a wide range of sizes with the size printed on the body.

SIZES AVAILABLE					
0.3g	0.4g	0.5g	0.6g	0.7g	0.8g
0.9g	1.0g	1.25g	1.5g	1.75g	2.0g
2.5g	3.0g	4.0g	5.0g		

IN-LINE OLIVETTES

Streamlined easily changeable olivettes complete with soft silicone tube for easy attachment.

SIZES AVAILABLE					
0.2g	0.3g	0.4g	0.5g	0.6g	0.8g
1.0g	1.2g	1.5g	2.0g	2.5g	4.0g

SLIP JOINT ALIGNERS

Pole Joint Aligners not only improve shipping together speed, they prevent the ends of pole sections getting damaged.

LOOP TYER

Loop tyer and disgorger comes in packs of two, supplied with full instructions.

DISGORGER

Plastic disgorger with two different ends. One end has traditional slot and the other a loop end for larger hooks. Choice of Small or Large.

JOINT RESTORER

An excellent way to build-up worn pole joints. This liquid carbon hardens with a top coat of Joint Save.

JOINT SAVE

Simply paint Joint Save onto joints to prevent excessive wear.

TOP TUBES

Designed for storing elasticated top two sections safely. Top Tubes are convenient and make best use of space. The specially designed elastic protector and end cap ensure that elastics are not damaged. Pat. pending. Design rights enforced.

POLE END PROTECTORS

Designed to protect pole end sections during transit. Available in a range of sizes to fit all larger pole sections, Pole End Protectors can also be left in place during fishing. Available in 38, 40, 42.5, 45 and 48mm.

BRISTLE GREASE

Fluorescent coloured pole tip grease that can be applied to fine pole tips to help them sit correctly. Very useful for wire tips. 1 x Orange and 1 x Yellow per pack.

PLUMMET

Large diameter top hole and grooved body for line location. Non-toxic alloy with flat cork base for accurate plumbing. Available in two sizes: 14g and 18g.

MICRO SILICONE

Ultra fine, high performance silicone tube. Will fit the finest wire and carbon pole stems. Available in mixed, 0.25, 0.40 and 0.50mm

POLE FLOAT SILICONE

High performance fine diameter silicone tube for thicker bristles and stems. Available in two sizes, thick and stick float.

JOINT PROTECTOR

Designed for pole joint protection, Joint Protector is clear, lube impregnated shrink tube that can be placed on pole joints to keep them in perfect condition. Available in three sizes 4th, 5th and 6 section.

QUICK BANDER NEW

Makes baiting up using bait bands quick and easy. Can be used to attach bait directly to the hook or hair.

BAIT BANDS

High quality latex bait bands in three sizes to cover almost all bait sizes. 100 per pack. Available in Micro, 3.2mm, and 4.8mm sizes.

WINDER ANCHORS

Preston Innovations Pole Winder Anchors are produced from high quality rubber that not only stretches well but also lasts a long time.

PRESTON DVDS

Filmed with top match angler and Preston Innovations consultant Andy Findlay, at the prolific Glebe complex, this informative series is presented by Match Fishing magazine publisher David Hall. Packed with action and informative tips, the DVDs go behind the tactics of one of the country's best commercial carp match anglers and reveal all of his methods in intimate detail.

FLOAT STOPS

Can be used for stopping sliding floats and also for creating semi-fixed feeder and bomb rigs. Available in three sizes: Micro, Mini & Standard.

MINI MATCH SWIVELS

Preston Swivels are perfectly formed swivels that spin easily. The ultimate match swivel. Available in three sizes: 20, 22, and 24.
