

KORUM RODS

KORUM

NEW
2010

At Korum we believe that building rods should be done with the utmost care and attention to detail. Throughout the last 12 months, we worked hard to develop what we believe is currently the most comprehensive range of rods for the modern coarse fisherman

NEW
2010

Precision

Keeper ring on all rods.

SiC rings throughout.

COMPACT FLOAT

This 11ft two-piece float rod is an absolute joy to use, weighing just 6 ounces and feeling even lighter thanks to the perfect balance, it can be held all day without becoming cumbersome. By using a combination of high-grade low-resin carbons we have produced a rod with a lightning fast action, making bites much easier to hit, yet which retains an action that bends right through the blank, eliminating hook-pulls. Designed for ultra-accurate casting at short to medium range, this is the ideal rod for fishing tight to islands with a small waggler for carp, fishing a dumpy waggler up in the water for roach, or trotting a stick float for fast biting dace.

NEW
2010

BIG FISH FLOAT

Designed to handle double figure carp, barbel and big tench close to weed, the Big Fish Float is our most powerful float rod ever, yet retains the fantastic fish-playing action and balance of its lighter counterparts. This rod took us longer to perfect than any other in the range, simply because we were not willing to compromise on the balance and feel of the rod just to obtain the right action.

Despite the massive reserves of power that this rod has, it handles superbly and can be held all day when trotting, or fishing for hard-fighting carp close to cover.

All Precision rods feature:

- Fully balanced weight distribution to minimize fatigue
- Superdur Ultra-durable matt black anti-flash blank finish
- Black supergrade whipping thread with two-pack varnish coat
- Titanium finish Fuji reel seat
- Optimal length ergonomic 'A' grade cork handles
- Ultra-lite SiC 'S' guides throughout
- Two-piece rods feature foldable ringing

POWER FLOAT

At 13ft with a progressive action, this four-piece rod is perfect for the All-rounder. Ideal for all species, it's a float rod that you can take anywhere and use for almost anything.

The four-piece construction meaning it can be hidden easily in the boot, or simply split into two and left tackled up.

NEW
2010

MULTI-FEEDER

Specifically developed to cover the majority of feeder and ledgering on stillwaters and smaller rivers, the two-tips of the Multi-Feeder give a multitude of options, fit the Quiver tip for maximum bite detection when feeder fishing, switching to the 1.5lb hollow tip when using bigger feeders and leads in conjunction with a bite alarm.

The action of the Multi-feeder is quite distinct from that found on our Specialist rods. The Multi-Feeder is best described as having a semi-fast action, with reserves of power in the butt and forgiving tips. This

Braid friendly SiC rings throughout.

Hi visibility tip on the Multi-Feeder.

Fuji reel seats, and best quality cork.

combination gives fantastic casting performance, yet allows the use of light hook lengths and small hooks, ideal for finicky carp and bream.

Over recent seasons anglers have increasingly used Multi-feeder rods fitted with the 1.5lb tip for Bagging Wagglers, Floating Method Feeder and Surface fishing for carp. The stiff action in the butt gives great casting accuracy, whilst the soft, forgiving tip absorbs the lunges of carp hooked close to the surface.

See page 28 to find out why The Korum Multifeeder 12' is Chris Ponsford's choice rod when it comes to effective feeder fishing.

"The Precision range has been developed to suit all specimen fishing requirements,"

Dai Gribble

NEW
2010

All Korum rods come with a 3 year rod guarantee

SPECIALIST 1.75LB AND 2LB

With feeders and leads for specimen fishing getting bigger, we have carefully tweaked the action of these rods to increase power in the butt and mid-section without affecting the fish-playing action. The result is a pair of rods built specifically for the modern specialist angler. We have carefully tweaked the action of these rods to increase power in the butt and mid-section without affecting the fish-playing action. Pick one up and you will notice the 'Steely' action and fast recovery that has been achieved without affecting the perfect balance and weight.

SPECIALIST 2.75LB

The 2.7lb Specialist provides a controlled build-up of power, making long casting easier, particularly with bulky loads, such as method feeders and dead baits. Not only do they make a great carp rod, they're also perfect for pike fishing and floodwater barbel sessions.

NEW
2010

KORUM RODS

KXi FREESPIN

Dai Gribble is currently one of the UK's top all-round anglers.

“Designed for the modern angler looking for the ultimate in performance when faced with today's larger specimens, the Neoteric range has won numerous plaudits since its launch. Each rod has been developed by the Korum design team and then strenuously tested to give optimum performance and fantastic styling.”

Dai Gribble

NEOTERIC TWIN TIP

Supplied with two tips that blend perfectly into the butt, the 1.75lb tip is ideal when targeting barbel, tench and bream on the feeder, whilst the 2.2lb tip is best for big rivers and reservoirs, when casting larger leads and feeders for barbel, carp and big bream.

Braid friendly tip rings.

SIC rings throughout.

Gunmetal reel seats.

Foldable keeper rings.

NEOTERIC QUIVER

A really versatile rod that thanks to its forgiving action will handle the light lines and small hooks often associated with Winter chub and roach, right through to big barbel.

With the 1.75lb hollow tip fitted this rod will handle big chub and barbel in small to medium sized rivers, and is also great for feeder fishing in stillwaters for tench and bream.

KXi
FREESPIN

KXi FREESPIN REEL

Tough, rugged and reliable are what the KXi Freespin Reels are all about. Built around hardened machine cut main gears that have been CAD designed to give positive engagement, even when under maximum load, you only need to turn the handle to feel the engineering quality of this reel.

Tighten the multi-disk front drag that is fitted with specially sourced low-friction disks and feel how smooth the even line can be taken from the spool; back-winding is well and truly a thing of the past! Engage the micro-adjustable rear freespin drag and line can be taken smoothly by running fish, keeping constant pressure reducing hook pulls. The KXi reels have been designed to handle all forms of modern coarse fishing, from large carp and pike with 10-15lb line, through barbel and tench fishing with 6-10lb line, to method feeder fishing and all forms of ledgering. Available in two sizes KXi 50 & KXi 60.

Available in two sizes:

KXi 50
Line capacity: 0.20/280, 0.25/240,
0.30/200, 0.35/160

KXi 60
Line capacity: 0.20/310, 0.25/265,
0.30/220, 0.35/175

A major breakthrough in reel design. The KXi reel is the result of almost two years of research and development by the Korum team, working from the ground up to develop a freespin reel designed specifically for the modern coarse angler

SUPER FREESPIN

BALANCED DOUBLE HANDLE

SENSITIVE FRONT DRAG

KORUM REEL LINE

Korum Reel Line is the perfect line for the modern angler. Its high abrasion resistance and superb knot strength makes it totally reliable in tough situations and when catching lots of hard-fighting fish.

The pale green colour blends in well with all backgrounds and the controlled stretch acts as an additional 'buffer' when playing fish close to the net. The neutral density means that Korum Reel Line is suitable for both feeder and float fishing.

Available in 150m spools.

NEW

“A strong, reliable line,”

Ade Kiddell

DIAMETER	BREAKING STRAIN KG/LBS
0.18mm	1.4kg/3lb
0.20mm	1.8kg/4lb
0.23mm	2.3kg/5lb
0.25mm	2.7kg/6lb
0.28mm	3.6kg/8lb

NETS AND SPOONS

SPECIMEN SPOON

Featuring super-soft mesh with large holes that is easy to handle even in a strong flow, the Spoon nets are ideal for use in both rivers and stillwaters. Choose the 27" Specimen Spoon for over-sized carp up to 25lb and specimen barbel and the slightly smaller 24" Midi Spoon for regular carp, tench, chub and bream.

- Extra strong machined metal spreader block
- Anodised aluminium frame for extra strength
- Deep mesh, ideal for reviving tired fish after a long fight
- Super-soft, wide mesh, ideal for both rivers and lakes
- Flat base cradles fish correctly

Available in two sizes:
Specimen Spoon 27"
and Midi Spoon 24"

LATEX BARBEL SPOON

Designed for over-sized barbel and carp to 30lb, the Latex spoons are designed to be the ultimate in net design. Offering the equivalent size as a 36" triangular net, the 30" net is ideal for the angler stalking large carp, or lure fishing for pike. The latex mesh used on both nets is highly hook resistant, making these nets ideal for pike fishing. The super-strong aluminium spreader block and frame can be pushed through thick weed, making it ideal for stalking.

- Fish-friendly latex mesh
- Deep mesh, ideal for reviving tired fish after a long fight
- Heavy duty frame and spreader block, ideal for stalking

LANDING NET HANDLES

A comprehensive selection of landing net poles, designed to perfectly complement our landing nets, giving the ultimate combination of strength, balance and stiffness.

- Powerstick handle is ideal for use with longer rods, or when you need extra reach
- Carbon Power is a lightweight, yet incredibly strong one-piece design
- Carbon Specimen is slightly heavier, but stiffer than the Carbon Power, making it ideal for bigger nets and larger specimens

NETTING FISH QUICKLY

Follow these tips to land fish with the minimum of drama.

Keep the rod low to stop the fish coming up too soon.

When the fish is close lift the rod to bring it up.

Keep the net well sunk and draw the fish over it.

Rest the fish in the margins for a minute before unhooking it.

KORUM

NETS AND SPOONS

SPECIMEN NETS

An extra strong landing net designed for the angler looking for maximum strength. Wide mesh is ideal for use in both rivers and lakes.

- Supplied with 1.8m (6ft) glass handle with non-slip finish
- Moulded polycarbonate spreader block and arm tips
- Deep mesh, ideal for resting fish after a long fight
- Micromesh sleeving on mesh around arms

3M KEEPNET

A fantastic keepnet designed to dry quickly, and offer maximum fish protection. Super-soft, yet extremely strong mesh make this net suitable for big weights of carp as well as other fish.

- Made from fish-friendly fast drying mesh
- Extra strong rings throughout
- Angle-adjustable top ring
- Pegging loops on bottom ring

"The Korum range of nets are suitable for all my fishing, whether I'm carping, chasing barbel, or catching smaller species on the float,"

Stuart Jupp

NET FLOAT

Designed to make landing fish on your own much easier. A simple float that attaches to your landing net pole ensuring that your net will not sink. Velcro loop can be used to keep the end of the mesh neat.

Get On The Feeder with Ade Kiddell

NAME: Ade Kiddell

BACKGROUND: Ade is one of Europe's finest river anglers, and is really well regarded in the barbel fishing world with numerous really big fish to his name. He's a regular on rivers like the Severn, Wensum and Trent, fishing on regardless of how high or low the river is. Ade has also caught big barbel overseas, and is the current Dutch record holder!

TOP TIP: Ade is never afraid to feed quite heavily when fishing for really big barbel, choosing a pellet-based feed for the majority of his fishing. The way he sees it, the bigger the fish - the more likely they are to want a good meal!

Are you fishing the feeder effectively? Big fish ace Ade Kiddell reveals his simple guide to catching more fish on the quivertip.

My earliest memories of swim feeder fishing are as a child fishing the Norfolk Broads with my father and using one of my mothers hair curlers crudely tied to the line and filled with breadcrumb to attract the hungry shoals of roach and bream.

Over the years feeder fishing has developed into a leading tactic for both match-men and pleasure anglers alike. It's moved on from being seen as a 'chuck it and chance it' method to the highly developed and successful technique we know today

The plastic tubes in various shapes and sizes we use as feeders fulfill the roll of bait delivery in much the same way as the hair curler we used all those years ago, but if you look for example at the range of feeders available from Korum, there are around 30 various shapes and sizes of feeder to chose from, which makes the

task of matching the feeder to your fishing circumstances much easier.

Keep It Simple

I prefer to carry a selection of feeders when I go fishing, as this enables me to change feeders to suit the venue or river conditions, as well as helping me pick out certain species. If I were fishing for bream and roach on a slow flowing river, for example, I would carry maybe a dozen feeders in a mixture of small and medium size in weights between 30 and 60 gram. If I were chub fishing on a faster flowing venue, meanwhile, then it might be weights ranging from 45 to 90 gram and when targeting barbel I would prefer to include some larger feeders with weights varying from 60 to 150 gram. The golden rule in all cases is not to use any more weight than is necessary. Ideally, the feeder should just hold the

bottom once it has discharged the feed. After all, the last thing you want is for the feeder to roll once it's empty, resulting in your hook-bait ending up nowhere near your free offerings!

To get the best from your feeder fishing, it's essential to get comfortable and have everything to hand. There's nothing worse than having to constantly get up to reach items of tackle or bait, which is why I use the Korum Accessory Chair [page 10]. It's a great chair this, because by using the adjustable leg system it's possible to get it level on even the steepest of banks. Also, by using some of the various attachments available for the chair, it's possible to have bait and tackle items close to hand when required. It's just like fishing out of an armchair - it really is that comfortable. >>>

Ade always makes sure he's got all the kit he might need - for any situation.

“One thing that makes feeder fishing such a great fish catching method is the ability to introduce free offerings at all distances, with accuracy being key”

Once the chair is has been arranged so I have all my other items of tackle and bait close at hand, I position my rod rest on the downstream side of my chair. If I am using a single rod, then I can attach a Korum Feeder Arm to the chair leg and adjust the height of the rod tip easily as required. Generally speaking, the stronger the flow the higher the rod top, because the more line I can keep out of the water in a strong current the less weight I will need for the feeder to hold bottom. Should I be fishing two rods, I prefer the Two-Rod River Tripod because its fully adjustable legs make it possible to get the height and angle I need to suit different river conditions.

Rods & Reels

I had always thought it near impossible to find a rod that would fulfill most of my feeder fishing requirements, that was until I used the Korum Precision Multi Feeder rod. It comes complete with two top sections – one with a quiver tip, ideal for

maximum bite detection and the other a hollow top for use when fishing with bigger feeders or bite alarms. I can honestly describe this rod as a true all-rounder, having used it for a nice bag of roach and bream on The Norfolk Broads as well as barbel sessions on the Severn.

Every good rod needs a reliable reel and the new Korum KXi freespin fits the bill nicely. I prefer a reel with a free spool facility for feeder fishing, as it allows me to take my eye off the rod without fear of having the rod pulled in. Another bonus is the click of the freespool paying out line acts as an audible bite alarm.

In certain situations, I also use the Korum KBI electronic bite alarm for feeder fishing, where it is essential to use a freespool facility. The KXi reel has fantastic line lay and a clutch as smooth as any reel I have ever used, both these features are vital when feeder fishing – especially when targeting bigger fish.

Depending on target species

and river conditions, I will use main lines from 4lb through to 10lb. A sinking line is preferable for feeder fishing, and a simple tip is to wipe your main line with a sponge dipped in mild detergent, as this process will sink your line like a stone.

One thing that makes feeder fishing such a great fish catching method is the ability to introduce attractive free offerings at all distances, with accuracy being the key. To cast accurately to the same spot every time, you'll need firstly to pick out a marker on the far bank and when casting, imagine a line between you and that marker and cast along that imaginary line. Secondly, to get the correct distance along that imaginary line, cast to the area you want to target and place the reel line in the line clip on the spool. Now every time you cast the feeder should land along our imaginary line at the distance set by the line clip. One word of warning! Avoid the line clip if targeting

bigger or hard fighting fish like carp or barbel, as a surging run can easily snap the main line at the line clip. Instead, tuck the line under an elastic band wrapped around the spool as this will trap the line for casting but still allow a hooked fish to take line.

The End Zone

When it comes to rigs for feeder fishing, it's best to keep things simple. There are two basic rigs I use, including an old fashioned Paternoster rig which works well on slower paced rivers, whilst for rivers with more pace I like to use a running rig.

You'll see how I tie my Paternoster rig in the images we've taken to illustrate this very basic approach. I like to incorporate quick change products, so it's possible to change feeder sizes or hooklinks at anytime without breaking down the rig. The guys at Korum have also come up with a modern version of the Paternoster rig in their

Quick-Change Heli-Rigs, which work straight from the packet.

The running rig is also simple to set up and works extremely well, offering very little in the way of resistance to shy biting fish. By using a free-running Korum Feedabead and Quick Change Beads, it keeps everything really straightforward and user-friendly. Again, check out the image sequence for an easy guide to tying this rig.

Ever since its introduction a few years ago, Preston Innovations' Reflo Powerline has been my favorite hooklink material when feeder fishing. It's available in breaking strains from under 11lb to over 12lb and is an ultra reliable line whatever the situation. The length of the hooklink depends upon the fishing situation but 18ins would be a good starting point whatever the scenario, but I will use anything from 4ins to 6ft depending upon the circumstances.

To complete my rigs, the Korum range of hooks is ideal. The S4 is a good hook when bream and roach are the target, but should you require a heavier version of the same pattern then the S3 fits the bill. Once bigger fish like barbel or carp are the target, then the S5 pattern comes into its own and will never let you down.

I hope this insight into feeder fishing helps you to catch a few fish whatever you may be fishing for. The biggest tip I can give is to have confidence, both in the tackle you choose and the bait you feed with. Combine that confidence with the effectiveness of feeder fishing and I'm sure you will be on to a winner and your fishing will be more productive and rewarding as a result.

See page 45 for the full range of Korum feeders.

PVA SYSTEMS

FEEDERS

PVA SYSTEMS

See page 52 for details of how Julian Chidgey uses the PVA system to great effect...

PVA SYSTEM

The Korum PVA System contains all you need for fast, easy construction of mesh PVA bags. The low residue, fast melt, anti-ladder micromesh PVA is of the highest quality. The unique scoop, funnel-shaped tube, allows for easy and accurate filling with pellets or groundbait when making bags and groundbait sticks. The shaped lower end of the tube limits the PVA spilling off the tube during filling. Shaped waterproof case complete with 'no loss' lid. Supplied with a plunger for use when forming PVA groundbait sticks and stick needle for use with bags and sticks. Refill PVA is also available in both Narrow and Standard diameters in both standard and ultra fine micro mesh.

RAPID MELT PVA SYSTEM

This new quick dissolving addition to the Korum range provides a perfect solution to Autumn, Winter and Spring PVA bagging. The system incorporates the same class leading features as the original system, but with a quick dissolving anti-ladder micromesh, essential for fishing commercials in winter where bites can be expected within seconds of the bait landing. Our sponsored anglers had fantastic results when fishing next to anglers using regular PVA last winter. Available in standard and narrow diameter. Supplied on a different colour funnel for instant mesh recognition. 5 metre refills also available in our unique compact waterproof container.

MICROFIBRE TOWEL

Microfibre Fleece towel with mesh carrybag. The micro fibre fabric absorbs approximately 6 times more moisture than conventional towelling. Essential for use when PVA bagging. Dry off your hook, hookbait and lead with the towel before attaching a new bag. The Microfibre material absorbs moisture resulting in trouble-free PVA fishing even in damp conditions. Size 60cm x 45cm

CATAPULT

The original Korum catapult has been designed as the perfect all-rounder. Use it with small boilies and pellets at ranges up to 50 metres, or with particle baits, such as hemp seed and sweet corn at closer range. Korum Spare Pouch & Spare Elastic available.

GROUNDBAIT CATAPULT

With a large moulded semi-rigid pouch, the groundbait catapult has been designed to give maximum accuracy and range. Because it does not squash the balls of groundbait the bait flies straight and accurate. Fitted with heavy duty elastic, this catapult is suitable for feeding groundbait up to 50 metres. Spare Groundbait Pouch available.

BOILIE CATAPULT

Ideal for feeding large amounts of boilies and larger pellets accurately at ranges up to 60 metres, thanks to the large cone shaped pouch. The Boilie Catapult provides a tight baiting pattern when loaded with multiple boilies. Spare Boilie Pouch available.

MESH FEEDERS

Large specimen mesh feeders with a flat base which holds bottom better than round feeders. The mesh construction is perfect for a quick release of damp pellets, other particles and groundbait. **Sizes Available:** SMALL 30G, MEDIUM 30G, MEDIUM 45G, MEDIUM 60G, MEDIUM 75G, MEDIUM 90G, LARGE - 60G, LARGE - 90G, LARGE - 120G, LARGE - 150G

OPEN ENDED FEEDERS

The holes in the side make them a slightly slower release than the mesh making them more suitable for deeper water or more difficult conditions. **Sizes Available:** SMALL 30G, MEDIUM 30G, MEDIUM 45G, MEDIUM 60G, MEDIUM 75G, MEDIUM 90G, LARGE - 60G, LARGE - 90G, LARGE - 120G, LARGE - 150G

CARP FEEDER

The most advanced Method Feeder ever produced. The aerodynamic shape and lead placing ensures that the feeder casts well and always lands the right way up, placing your hookbait in the correct position, every time. **Sizes Available:** LARGE (HEAVY ELASTIC), LARGE (MEDIUM ELASTIC), SMALL (HEAVY ELASTIC), AND SMALL (MEDIUM ELASTIC)

IN-LINE CARP FEEDER

Perfect for waters where fixed feeders are banned, or for using when targeting larger carp with advanced hooklink set-ups. **Sizes Available:** LARGE, MEDIUM, SMALL

IN-LINE METHOD FEEDER

Suitable for casting longer distances, due to its base mounted weight, which is offset to one side. This ensures that you can bury your hookbait with confidence once the feeder has settled on the bottom, your hookbait will be perfectly presented. Supplied with a swivel and tail rubber which combine to make a neat set-up. **Sizes Available:** LARGE 50G, SMALL 30G

HOOKS, RIGS AND TERMINAL TACKLE

KORUM

QUICKSTOPS

KORUM S4 HOOKS

- Same shape as the S3, but made from a lighter gauge wire
- Ideal when you need a finer presentation
- Ideal for delicate feeders, such as chub and tench
- Teflon coated non-flash finish
- Also makes the perfect floater fishing hook

Sizes: 10, 12, 14, 16 & 18

KORUM S3 HOOKS

- Our strongest hook yet, thanks to the heavier gauge wire and short shank
- Teflon non-flash low visibility finish
- Chemically sharpened, in-turned point keeps its sharpness longer
- 12° Down-turned eye ensures hook flip in the fish's mouth
- Wide gape for maximum hooking potential when using hair rigs
- Perfect for hair rigs, particularly with bottom baits

Barbless Hooks Sizes:

6, 8, 10, 12, 14, 16 & 18

Barbed Hooks Sizes:

4, 6, 8, 10, 12 & 14

KORUM S5 HOOKS

- Super strong high carbon steel construction for maximum strength
- Teflon non-flash low visibility finish
- Down turned-eye creates perfect angle for anti-eject sleeves
- Chemically sharpened straight point for easy penetration
- Ideal for pop-ups and braided hair rigs

Barbless Hooks Sizes:

6, 8, 10 & 12

Barbed Hooks Sizes:

2, 4, 6, 8, 10 & 12

The Korum Seamless range of hooks have been nothing less than revolutionary, since their launch. The seamless eye construction eliminates any chance of the hook length material being damaged by being forced into the gap in the eye found on traditional hooks. Whether you use braided, fluorocarbon, or nylon hook lengths, Seamless hooks will give you peace of mind

HOOK HAIRS WITH QUICKSTOPS

This super fast bait stop system comprises a high quality eyed hook, tied braid hair and Quickstop. Perfect for boilies, soft pellets, meat and corn, making fishing with a hair rig and mounting a bait ultra simple. The barbed version has been designed for anglers who prefer barbed hooks when fishing for barbel, chub, tench, bream and also for carp. The small barb gives more security, especially in situations where fish may get weeded.

BRAID HAIR RIG

Featuring our S5 hook this tough, no-nonsense rig is designed for big fish. The 10 and 12 are size for size the toughest rigs around. The rig sleeve helps reduce tangles, whilst the weighted braid ensures your hooklink stays on the bottom. Use with the Korum Lead Clip kit for a strong safe rig.

- Tied using sinking 20lb braid
- Extra strong Korum hooks
- Precision tied hairs

Barbless Hooks Sizes: 6, 8, 10 & 12

Barbed Hooks Sizes: 4, 6, 8, 10 & 12

HOOK HAIRS WITH BAIT BANDS

The easy way to use hard pellets on the hair. Perfectly formed hair rigs with a sure-grip bait band that make these the perfect rigs for use with all hard pellets. Featuring extra strong hooks to make these perfect for carp, barbel, chub and tench.

EASY HAIR RIG

The Mono Easy Rig gives you a choice of bait attachment. For banding soft or hard pellets place the pellet into the loop then slide the rubber stop down to trap your bait. Use with a baiting needle for conventional hair rigging, with predrilled pellets the rubber

- stop can be used to hold the bait firmly on the hair to prevent the stop being knocked out.
- Innovative adjustable bait attachment
 - Line strength matched to hook size
 - Extra strong Korum hooks
 - Ideal for pellets, boilies and corn

Barbless Hooks Sizes:

4, 6, 8, 10, 12 & 14

Barbed Hooks Sizes:

4, 6, 8, 10, 12 & 14

QUICKSTOPS

The innovative Korum Quickstops are a major breakthrough in bait stop design. Permanently attached to the hair, Quickstops cut baiting time down and make attaching small baits like meat, corn and mini boilies super fast. The best, most convenient bait stops ever invented.

XL QUICKSTOPS

Designed for use with larger and harder baits, the new XL Quickstops are perfect for boilies, large pellets and meat baits. Made from a super-strong material that can be pushed through harder baits than the original Quickstops.

XL COLOURED QUICKSTOPS

Available in pellet brown, and boilie red and yellow, these XL Quickstops have been designed to offer the correct colour to complement your chosen bait, making them blend in and be less visible.

QUICKSTOP NEEDLE

The Korum Quickstop Needle is designed to be used with Quickstops. You insert the needle directly into the Quickstop and then push it through the bait before removing to leave the Quickstop in place.

Regular

XL

(Actual size)

NEW 2010

With hard baits push the Quickstop Needle through the bait first to make a hole or use a bait drill

"Quickstops have revolutionised my fishing. You can attach any bait with ease and speed, which is perfect when day session fishing,"

Chris Ponsford.

QUICKSTOPS ON HAIR RIGS

Identical to the hugely successful Korum Hair Rig, but with a Quickstop fitted. Brilliant for drilled pellets, sweetcorn and meat fishing.

HOW TO USE QUICKSTOPS

Bait up quickly and easily by following these simple steps.

1. Insert the Quickstop needle into the Quickstop on your hair rig.

2. Gently push the Quickstop needle (with the Quickstop on it) through the bait.

3. Once through the bait gently ease the Quickstop off the needle.

4. The finished presentation is absolutely spot on.

ACCESSORIES AND LINE

ACCESSORIES AND LINE

LEAD CLIP KIT

A bolt rig is where, on picking the hookbait up, the full weight of the lead is felt by the fish causing it to bolt off giving very positive bite indication. A lead clip provides the safest most efficient type of rig for bolt rigging. As the swivel is held in place by the pin, if the lead is snagged or caught in heavy weed it will eject to prevent the lead being attached to a broken rig. For variable tension on discharge alter the position of the sleeve on the ribbed lead clip. Available in two sizes.

RIG SLEEVE

Long tapered sleeve makes for neat streamlined presentations and provides a boom effect that dramatically reduces hooklength tangles. Perfect for use with quickchange swivels, they can be trimmed to length if required. Also used in simple tangle-free feeder rigs.

ANTI-EJECT RIG SLEEVES

All the benefits and more of shrink tube but without the hassle. Tie rigs in seconds without needing boiling water, Safer and quicker. It's 'Fishing Made Easy'. Use instead of shrink tube to produce rigs with increased hooking efficiency. Simply cut the tubing to your required length, thread on to your hookline and slide over the hook eye and knot. The tubes flexibility ensures that on the take the direct pull is to the hook eye, which will lead to more fish hooked and better hookholds.

QUICK CHANGE BEADS

Quick Change Beads enable you to change your hooklength instantly and also act as a shock bead when fishing a running feeder. Simple to use and totally reliable (they've been thoroughly tested in extreme conditions and will never let you down), they are perfect for stillwater and river styles of feeder and bomb fishing. Sizes standard and large.

PASTE CAGES

Paste fishing made easy: Simply begin by tying the Paste Cage to the end of a standard hair rig. Then push the Cage into your chosen paste until the inner is filled. Mould the paste around the outer cage to create your hookbait. Paste cages really are the ideal solution to making paste fishing easier. Available in two sizes, large and small.

"In my opinion, Korum Paste Cages really do make paste fishing very easy"
Duncan Charman

BOILIE STOP

Simple easy-to-use stop in a range of different colours to match most baits. Just cut to length and insert into hair loop.

INVISI STOP

The clever design of this stop means that when it is in place no stop can be seen. Designed to fool the wariest of fish. Insert in hair loop then pull into the bait.

PELLET STOP

Originally designed for use with drilled pellets. The flat moulded ends on the feet allow easy insertion into hair loops. Also excellent for use with soft pellets and boilies. Available in three different lengths allowing you to easily alter your hair length.

LINK SWIVELS

Perfect for quickly changing feeders or bombs, Korum Link Swivels are small, neat, easy to use and totally reliable.

FEEDABEADS

The free-running, low friction Korum Feedabead keeps resistance down to a minimum and has a quick change clip for fast changing of feeders and bombs.

FLOAT ADAPTERS

Can be easily moved or removed for storage. Perfect for controller floats, bagging wagglers and floating method feeders.

BUFFER BEADS

Supplied in three sizes to match your rigs.

SWIVELS

High breaking strain swivel, free rotating under load with a low glare finish for rig concealment. Available in three sizes.

QUICKCHANGE CLIP

2 sizes of clip to match the lead clips. Enables rapid rig changing when using looped or swivel rigs supplied with silicone sleeving for extra protection. Perfect for stick rigs. Also used for spinning traces and very simple tangle-free feeder rigs.

RUNNING CLIP

For quick release running rigs without breaking down your rod, simply thread the running clip and sleeve on the line above your buffer bead, pull back the sleeve and attach your lead. When you have finished fishing remove the lead to allow to have made-up rods without the lead damaging them in transit.

QUICKCHANGE SWIVEL

Streamlined all-in-one swivel allows 'rapid rig' change and is perfect for stick rig presentations.

RUBBER BRAID STOPS

High-grade rubber stops made from extra grippy rubber so they go on easily but stay put.

READY HELI-KITS - STANDARD SWIVEL

These ready-to-go rig kits have been designed to create the perfect Helicopter rig. They're ideal for feeder fishing and legering.

READY HELI-KITS - QUICK-CHANGE SWIVEL

These Heli-Kits come with a quick-change swivel that's perfect for anglers who like to change their rigs regularly throughout a session.

READY HELI-KITS - SNAP-LINK SWIVEL

These particular kits come complete with a snap link swivel, making it ideal for anglers using pellet wagglers and other floats.

FLOATS, TOOLS AND TERMINAL TACKLE TOOLS

KLEAR CONTROLLER

The new Korum Klear Controllers are a subtle non-flash translucent green colour to prevent spooking fish. Designed for surface fishing, these loaded controllers have in-built flights for accurate casting and changeable sight tips to suit different conditions. The line is attached to the top of the controller to prevent line sinking and provide a quicker strike. Available in two sizes: 10g and 20g.

SUPA SOFT IMITATION CORN

A buoyant imitation bait that can be used in a number of ways to fool fish that are difficult to catch. Ideal for feeder or float, Supa Soft Corn is very soft so it can be hooked conventionally or mounted onto a hair.

KORUM MARKER FLOATS

Korum Marker Floats have a compact design that allows them to be used with lighter leads than traditional (larger) floats, reducing disturbance. Specialist rods and reels are also not required. Minimum recommended tackle consists of 10lb main line and a 1 ¼ lb test curve rod.

CONTROLLERS

Korum Controllers are specially designed for surface fishing. The dumpy shape prevents the controller from diving under the surface on the cast and the high visibility tips are easy to see. The Top Attachment is perfect for calm conditions and can be fished free-running. Available in: 4g, 6g, 8g and 10g.

BLOBS

High Visibility floats designed for shallow fishing. Excellent for weedy swims, they are easy to attach onto your line using the pre-threaded wire loop. Six per pack. Available in two sizes: Medium and small.

USING CONTROLLERS

Follow these steps to make a simple, tangle-free controller set-up.

Slide a stop up onto your mainline

Follow this with your Controller

Now slide on Buffer Bead

Using a grinner knot, tie on a swivel, pull the Buffer Bead over the swivel and semi-lock the Controller in place with the stop

Tie on your chosen hook length, incorporating a Rig Sleeve and you are ready-to-go

NEW 2010

BAITING TOOLS

Ten essential tools that will cover all of your baiting and rig tying needs. Made using high steel needles for maximum strength, and moulded into the handles. The ergonomically shaped handles have been designed to be comfortable in the hand, and are made from a high visibility material so that they are easy to find, even in low light conditions.

"There's a Korum tool for every conceivable eventuality. The new Drill and Needle kit is arguably the finest available," - Chris Ponsford

NEW 2010

DRILL AND NEEDLE KIT

Offers superior performance and longevity compared to standard tools.

- Stainless steel machined drill
- Up to five times stronger than a conventional bait drill
- Super-sharp – cuts through hard baits with ease and keeps its edge longer.
- Barbed Safety Needle with recessed barbed so as not to split baits or damage braided hairs.

BAITING NEEDLE

Designed for soft baits like meat, corn, paste and pellets. The ultra thin needle reduces bait damage and is perfect for using with Korum Bait Stops.

See page 5 for details of the new Korum ITM Tool Kit

BRAID SCISSORS

These razor sharp Korum Braid Scissors have been designed for cutting braid and mono line cleanly. They feature an easy grip soft touch handle and a serrated steel blade that slices through braid.

LINE SNIPS

Ideal for cutting mono line close to knots. Leaves a neat end on thicker mono without flattening.

BAIT STOPS

Totally different to conventional bait stops, the Korum version, when used in conjunction with the Korum Baiting Needle, makes baiting the hair loop simple, quick, easy and secure. The clear colour means that they are almost invisible once in place.

PELLET BANDER

The quickest, simplest way to band hard pellets perfectly every time. The Pellet Bander comes in three sizes (6mm, 7mm, 8.5mm) and holds empty bait bands ready for instant use.

NEW 2010

BAIT BANDS

Korum Pellet Bands are the ideal solution for hard pellets. Two sizes are available, both produced from neutral coloured pure latex that stretches easily to fit all pellets from 4mm to 20mm. Use with the Korum Pellet Bander for perfect results.

BAIT PUNCHES

The Korum Bait Punch is designed to punch out hookbait sized pellets from both luncheon meat and paste. Quick and simple to use. There are four sizes in each pack to suit all hook sizes.

JULIAN CHIDGEY

THE POWER OF PVA

NAME: Julian Chidgey

BACKGROUND: Julian is currently one of Britain's most successful big fish anglers. He's the 2010 Drennan Specimen Cup winner, and has a seriously impressive string of very big fish of all species to his name. Jules is also regarded as one of the best predator anglers in the UK today.

TOP TIP: Julian puts a lot of importance in watercraft, taking time to search around a venue to find the species of fish he's looking for. He recommends looking for areas that provide cover for fish, or weedbeds that may be full of natural food. Putting your rods out in the right place makes a huge difference!

Julian Chidgey looks at how you can enjoy a mixed bag of coarse fish using one of modern angling's most prolific methods

No other product has aided bait presentation to the extent that PVA has. Whether aiming to present a small parcel of bait in a weedy swim for carp; a stringer of pellets in a pacy river swim for barbel, or a stick of groundbait for tench and bream, PVA is the versatile answer to many difficult baiting situations.

Just a quick look in your local tackle shop will confirm its popularity, with dozens of products available. As a massive PVA fan myself, I have spent a lot of time trying various bags, mesh, string and thread, and I believe that in the two sizes of mesh tube offered by Korum, I have finally found a 'do it all' PVA product.

So why are these products so good? Unlike much of the PVA on the market, the Korum mesh is made from a unique anti-ladder material that can take abuse from rough hands without falling to pieces before it even gets near the water! The high quality PVA works in all water

temperatures, whilst its fine mesh construction allows the use of even the smallest crushed baits or fine ground bait mixes. What's more, the central tube on which the PVA is mounted is splayed at the top, to allow bait to be easily funneled in. The tube also comes in a small carry case which protects the PVA from moisture, and can also hold the supplied baiting needle, and compressor stick.

PVA for all

Many anglers view PVA as a specialist item – the preserve of long stay carpers tucked away in a bivvy, as opposed to the everyday angler. But nothing could be further from the truth. With a little thought, I'm sure this product could improve your day-to-day fishing.

My personal favourite PVA setup revolves around the use of a very traditional bait – the humble maggot, which is often overlooked in modern angling. With many anglers preferring

pellets, meat and boilies, these grubs often produce a reaction when all else fails. Their lively action stimulates fish into feeding activity in a way that static baits don't, and every species from the smallest roach to the largest carp will fall foul of their charms. It means you will never have to wait long for your next bite, which is exactly how I like my fishing!

To make the most of the universal appeal of the maggot, I use a very simple running ledger setup incorporating a Korum running clip mounted on 6lb main line. I normally begin my session with a 1oz flat lead, stepping up or down to suit prevailing conditions on the day. The running clip is stopped by a Buffer Bead, below which sits a 12 inch hooklength of 10lb braid attached to the main line using a swivel covered by a Korum anti-tangle sleeve. On the end of this sits a size 14 S4 hook onto which I mount a couple of maggots. If a barbless hook

rule is in place at the venue that I'm fishing, I will always tip the hookbait with one of the ultra-realistic, soft plastic maggots to stop the lively critters wriggling off the hook!

I match this setup to my favourite rod, the Korum Multi-Feeder, and a Korum KXi50 free spin reel. I find this set up gives a great balance which still provides good sport from our smaller species, yet gives me enough power to tame a hard fighting carp or tench should I be lucky enough for one to come along!

Coming from a specialist angling background, I often use two different outfits to cover different parts of the swim, but this rig is also the perfect setup for use as a 'sleeper' outfit resting on a Korum KBI bite alarm, whilst you fish the float or pole.

Accuracy pays

Having found an area that I wish to fish, I tie a simple ►►

The Power of PVA

JULIAN CHIDGEY

KORUM

THE POWER OF PVA

“The accuracy of this method is unbeatable, with each cast presenting a small area of attraction which surrounds your baited hook”

marker on my main line with some Preston number 4 pole elastic to ensure that I cast to the same spot each time. The advantage of using this method as opposed to clipping the main line on the spool is that I'm in total control if a bigger, more powerful fish is hooked.

I always begin my session by making several casts with large bags of maggots around the size of a tangerine, to ensure that I have an irresistible bed of maggots in my swim. I then aim to recast every 10 minutes throughout the session, using bags around the size of a table tennis ball nicked straight onto the hook to keep my swim topped up. The accuracy of this method is unbeatable, with each cast presenting a small area of attraction which surrounds your baited hook, concentrating feeding activity right where you want it!

Presenting the loose fed maggots in PVA mesh also has several other great advantages over other baiting methods. For starters, it avoids having to try to

accurately catapult the bait. The PVA also doesn't break down until the bait is on the lakebed, which means that small fish aren't eating your feed on the drop, as they often do with maggots that have been catapulted into the swim. The quick breakdown time of the Korum PVA also means your rig is fishing to maximum efficiency within seconds of settling on the bottom, which often results in lots of instant bites, meaning more fish in the net through your session!

Over the last couple of years this deadly combination of Korum PVA mesh and maggots has produced some amazing catches for me, with many great mixed bags from a variety of commercial and natural waters – as well as some great specimens including big perch, double figure tench and carp in excess of 40lb! For me, that's the biggest selling point of this highly productive method... you simply don't know what the next bite will produce!

How to tie a mesh PVA bag

1. Korum PVA stocking system allows bags to be tied using a variety of baits – in this instance maggots.

2. Fill the funnel with the required amount of bait.

3. Using the plunger compact the bait so you can form a nice tight bag.

4. tie off the bag using a simple overhand knot.

5. Tie a second knot (this forms the end of the next bag) and cut the PVA between the knots.

6. As shown in the above photo this process can be used to make PVA bags with many different baits

CLOTHING

ALL WEATHER SUIT

The new All Weather Suit has a warm removable quilted lining for all year round use (this can be worn individually). Waterproof (hydrostatic head 10m) and breathable, it has stormflap closure on all pockets. Made from 'soft touch' Nylon Tason it has reinforced padding on all heavy wear areas making it comfortable to wear and very practical.

- 10,000mm waterproofing
- Fully breathable
- Removable quilted lining that can be used separately
- Detachable volume-adjustable hood
- All heavy wear areas have been reinforced for extra strength
- Stormflap closure on all pockets
- Twin chest pockets and hand pockets
- Velcro adjustable cuffs
- Zipped gussets on trousers for easy boot removal

THERMAL SUIT

Loaded with quality and features, the Korum Thermal Suit is padded and reinforced where it needs to be and has its pockets in all the right places. It is totally waterproof (hydrostatic head 10m) and is made from 'soft touch' Nylon Tason. Both the Jacket and Bib & Brace have a thermal padded lining.

- 10,000mm waterproofing
- Made from Nylon Tason with an innovative 'soft touch' finish
- Thermal lining for maximum warmth
- Detachable volume-adjustable hood
- Comfortable velcro-adjustable cuffs
- Reinforced knees and, shoulders and arms

"It's clear that all of Korum's suits have been designed with maximum practicality in mind."
Duncan Charman

Korum clothing has gained an enviable reputation for hard-wearing quality and supreme performance. Korum clothing is designed to be perfect for the mobile angler, even through the worst of the British climate.

2-PIECE UNDERSUIT

Designed to be worn next to the skin as a base layer. The advanced fibre wicks away moisture keeping you comfortable and dry.

KORUM BOOTS

Waterproof, twin-layered boots that are easy to walk in and very warm. The liners can be removed for washing and Neoprene calf and top provides comfort and reduces heat loss.

NECK WARMER

Windproof neck warmer. Perfect for wearing under loose outer garments.

BEANIE HAT

Fitted beanie hat that can be pulled down for warmth.

BASEBALL CAP

Adjustable peaked cotton cap with Korum logo.

HOODED FLEECE

Warm hooded half-zipped fleece with a front zipped pouch pocket and zipped hand warmer pockets. Toggle adjustable neck and elasticated cuffs.

**NEW
2010**

LEISURE FLEECE

An exceedingly warm full-zip fleece that looks just as good off the bank as it does on it.

- Heavyweight, machine washable, 280g anti-pill fleece
- Chunky full length zip
- High collar
- Easy slide nylon lined sleeves with elasticated cuff
- Hand warmer pockets

WINDPROOF FLEECE JACKET

Totally windproof jacket with hood that can be worn as an outer garment or as part of a layer system. Full length zip and toggle neck adjustment.

**NEW
FOR AUTUMN
2010**

KORUM HOODIE

This fashionable hooded sweatshirt is an ideal bit of bankside clobber. It features the stylish Korum logo on the shoulder, and also has a built in front pocket.

**NEW
FOR AUTUMN
2010**

KORUM T-SHIRT

The Korum T-shirt features the same stylish embroidered Korum logo as the Hoodie and is ideal on those warmer fishing days.

POLARISED GLASSES

Essential kit for every angler, polarised glasses are essential for efficient fish spotting and help reduce eye-strain in bright conditions.

- Available with brown or grey lenses
- Polycarbonate frames
- Fashionable design
- Metal hinges
- Supplied in hard-case with lanyard and cleaning cloth
- CE certified

**NEW
2010**

Detachable hood on all suits

Velcro adjustable cuffs

Quick lock adjustable straps

Wide opening zipped leg
